

ACTIVITY CLOCKS AND MAPS

“A device which has a tremendous impact on everyone’s life to keep everything organized is a CLOCK.”

The clock is one of the oldest human inventions, meeting the need to measure intervals of time shorter than the natural units: the day, the lunar month, and the year.

A map gives a minute depiction of a very large space. It acts as a guide in places which we have never visited before. They give us the distance in two places, mountains, rivers, railway station, airport, and shapes of places or destinations.

Both of them are very important in our life.

Let us join hands and learn something more about them. We will have quizzes and much more fun in this month's activity. Save the time and date to join in and enjoy.
