# MATCH WITH MATHS

Matching is a precursor to learning how to classify items and to identify relationships between them. Matching is also an early math skill. It helps students learn to identify properties of objects that are the same, which sets the foundation for early geometry learning.

Let's do an activity "MATCH WITH MATHS" where our children will learn to match & have fun with different shapes.

Our tiny tots have to select any 1 shape & draw/ paste as many pictures as they can which are related to the chosen shape. They will paste/ draw it on a chart paper in the virtual session mentioned below. One parent is allowed to help the child in this activity.

(Ex- For circle- Pictures of bangle,lollipop,sun……..)
