

ORIGAMI

Ancient art of paper folding has applications in the modern-day classroom for teaching geometry, thinking skills, fractions, problem solving, and fun science. This art form engages students and sneakily enhances their skills, including improved spatial perception and logical and sequential thinking.

Let's do an activity ,where our children will learn that it is fun to express their creativity & feelings.

Origami helps in developing hand-eye coordination, fine motor skills and mental concentration.

In this activity,the students can use any colour paper & show their creativity on paper folding origami within the given time span. One parent is allowed to help the child in this activity.
