

WELCOME TO SOCIAL SCIENCE

SUBJECT : (GEOGRAPHY)
CHAPTER NUMBER: 3
**CHAPTER NAME : THE CHANGING FACE OF THE
EARTH**

CHANGING YOUR TOMORROW

Forces of Mountain Building Process

There are different kinds of mountains:

- **Fold Mountains (Folded Mountains)**
- **Fault-block Mountains (Block Mountains)**

Fold mountains are formed when two plates collide head on, and their edges crumbled, much the same way as a piece of paper folds when pushed together.

Examples of fold mountains include: Himalayan Mountains in Asia

- **the Alps in Europe**

Fault-block Mountains

These mountains form when faults or cracks in the earth's crust force some materials or blocks of rock up and others down.

- Examples of fault-block mountains include:
- the Sierra Nevada mountains in North America
