

SESSION : 07

CLASS : 04

SUBJECT : SOCIAL SCIENCE

CHAPTER NUMBER: 01

CHAPTER NAME : LANDFORMS OF THE WORLD

SUBTOPIC : LONG Q/A

CHANGING YOUR TOMORROW

LEARNING OBJECTIVE

Children will come to know

- different landforms
- rivers
- types of river

India Map

RECAPITULATION

- **Name one desert.**
- **Which mountain is a fold mountain in India?**
- **Define tributaries.**
- **Which is the largest delta in the world?**
- **Name one plateau.**

D. Answer the following questions.

1. What are landforms? Name the main landforms of the Earth.

Ans. The different features that make up the Earth's surface are called landforms . The main landforms of the earth are mountains, plains, plateaus and deserts.

2. What are fold mountains? Give an example.

Ans.Some Mountains are formed when two large land masses push against each other they are called fold mountains.

Example - Himalayas and Rockies in the North America and the Alps in Europe are fold mountains.

Q3. What is the difference between a mountain and a Plateau?

Mountains	Plateaus
Mountains are Rocky masses of land that Rises higher than the surroundings.	A large area of land that is higher than the surrounding and more or less flat at the top is called a plateau.
Mountains have very steep slopes and high peaks .	Plateaus do not have steep slopes and high peaks.

4. A landmass which projects into the sea and is surrounded by water on three sides is called a Peninsula.

Example the southern part of our country is a Peninsula

4. What is a peninsula? Give an example.

Ans. Landmass which projects into the sea and is surrounded by water on three sides is called a Peninsula.

Example- The southern part of our country is a Peninsula.

5. What is the difference between a perennial and a seasonal river?

Ans.

Perennial rivers	Seasonal rivers
Perennial river starts in mountains from melting snow glaciers.	Seasonal rivers are formed from the rain water
Perennial rivers have water throughout the year.	Seasonal river do not have water throughout the year.

6. What is the difference between a tributary and a distributary?

Ans. Several small rivers that join with the main river are called tributaries. Before entering into the sea, the river carries a lot of sediments. This gets deposited on the way and causes the river to break up. The channels are called distributaries.

7. What is a desert? Name some of the important deserts of the world?

Ans. Deserts are large, extremely dry areas of land that receive very little rainfall. They are called deserts.

The important deserts of the world are:

- The Sahara desert in North Africa.
- The Kalahari Desert in Southern Africa.

LEARNING OBJECTIVES:

Children will come to know

- **Children will come to know about different examples of landforms.**
- **Children will be able to answer the following questions.**
