

DATE : 19.04.21

SESSION : 5

CLASS : IV

SUBJECT : (SOCIAL SCIENCE)

CHAPTER NUMBER: 1

CHAPTER NAME : LANDFORMS OF THE WORLD

SUBTOPIC : Rivers

CHANGING YOUR TOMORROW

LEARNING OBJECTIVE

Children will be able to:

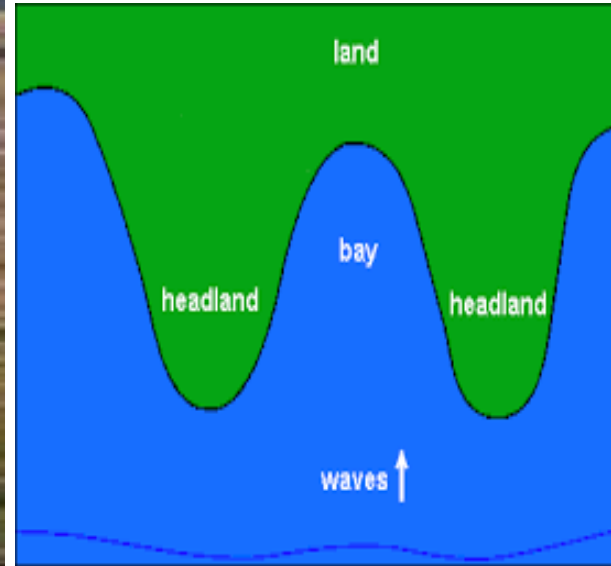

- 1. Know about river.**
- 2. Perennial river**
- 3. Seasonal river**

Recapitulation:-

Identify the Landforms.

A Bay is a water body running into land and surrounded on three sides by land.

Island - Landmass surrounded by three sides water.

Cape- The tip of the peninsula is called the Cape.

Peninsula- A landmass which projects into the sea and is surrounded by three sides water.

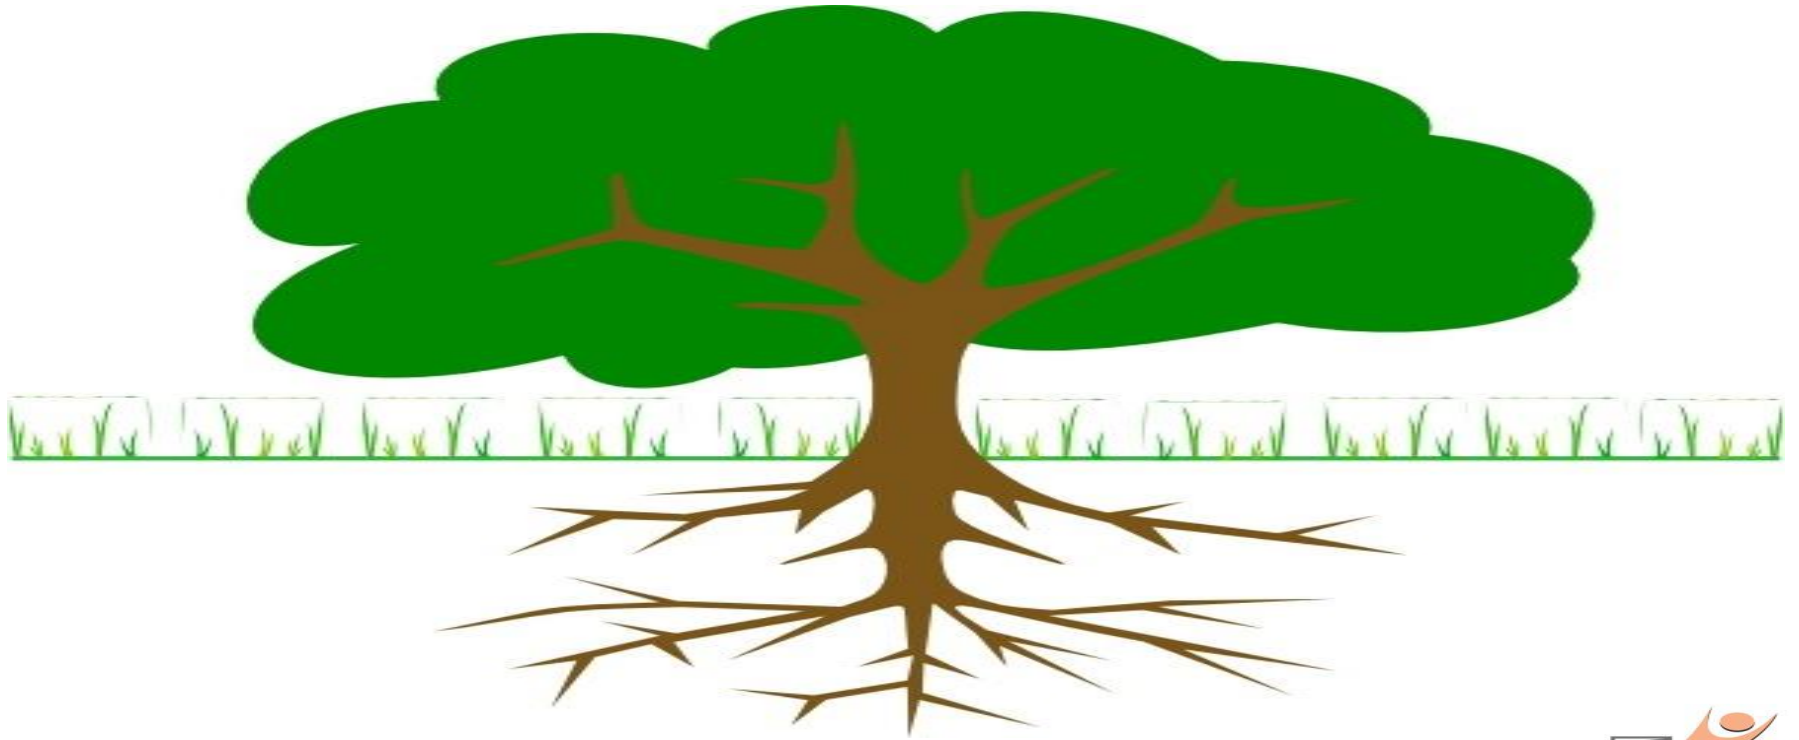

Remember and Share:-

Can you name some sources of water?

Why water is important?

From where do you get water?

Is water is in liquid form on Earth?

Long streams or Water are called rivers.

Features of a River

When glaciers and snow melts, it forms rivers.

Along the course of a river, several smaller rivers join the main river.

They are called tributaries of the main river.

**Before entering the sea, the river becomes very slow.
It carries a lot of sediment.**

**This keeps getting deposited on the way, and causes the river to
break up into channels or distributaries.**

**These spread out like a triangle before falling into the sea.
Such a region is called a delta.**

Important rivers

- The delta made by the Brahmaputra and the Ganga is the largest in the world.
- The Nile in Egypt is the longest river in the world.
- Some other important rivers are the Mississippi in the USA,
- The Congo in Africa and the Ganga in India.

- **Many rivers start in the mountains from melting snow in glaciers.**
 - **They have water throughout the year and are called perennial rivers.**
- Most rivers in North India are perennial rivers.**

- **In South India, rivers are formed by rainwater.**
- **They do not have water throughout the year. Such rivers are called seasonal rivers.**

India Map

Q3. What is the difference between a mountain and a Plateau?

Mountains	Plateaus
Mountains are Rocky masses of land that Rises higher than the surroundings.	A large area of land that is higher than the surrounding and more or less flat at the top is called a plateau.
Mountains have very steep slopes and high peaks .	Plateaus do not have steep slopes and high peaks.

HOMework

Do worksheet 1 to 4

**Write the difficult words in notebook
(page-6)**

LEARNING OUTCOME:

By the end of this class, students will be able to:

Know Perennial rivers

Seasonal rivers
