

1. Rewrite the following code of statements after correcting the syntactical errors.

```
a) a=integer(input("First number"))
b=10
for i in range(a:b);
```

```
PRINT(a*b)
```

```
if (a>b) then
```

```
print(a)
b) b=10
while (i=>5):
print(l)
i=l+1:
```

2. Rewrite the following for loop program using the while loop.

```
a=int(input("Enter the first number"))
```

```
b=int(input("Enter the second number"))
```

```
for i in range(a,b,3):
```

```
print(a*i)
```

```
print("Program Over")
```
