CLASS : IV
SUBJECT : MATHEMATICS
CHAPTER NUMBER : 13
CHAPTER NAME : GEOMETRY
SUBTOPIC : LETS RECALL, TYPES OF
STRAIGHT LINES, EX-13 B

CHANGING YOUR TOMORROW

LEARNING OBJECTIVE

- Enable the students to understand about the types of straight lines.

LETS RECALL

1. Tell whether the following lines are “**curved**” or “**straight**”.

(a)

Curved

(b)

Straight

TYPES OF STRAIGHT LINES

Parallel lines : The lines which do not meet at any points no matter in whatever direction we continue, are known as parallel lines.

The distance between these lines is always equal even if we measure it from anywhere.

TYPES OF STRAIGHT LINES

Intersecting lines : The lines or line segments which cross each other at any point are known as **intersecting lines**.

Non-parallel lines are always intersecting lines.

3. Fill in the blanks.

- (a) Non-parallel lines are Intersecting lines.
- (b) Distance between parallel lines remains same from anywhere.
- (c) Parallel lines do not meet at any point.
- (d) Lines which meet each other at any point are known as Intersecting lines.
