# SOLID SHAPES

- Solid shapes are nothing but solids that consist of 3 dimensions, namely **length, breadth, and height**.
- Solid shapes are also known as **3D shapes**.
- These solid shapes occupy space and are found in our day-to-day life.
- We touch, feel, and use them.
- In this fun lesson, you can check out some interactive examples to know more about these shapes

## SOLID SHAPES

### Sphere

A ball – like shape is called a sphere. It has only one face. It has no edges and no corners.

### Examples:
