LEARNING OBJECTIVE:

Children will:

- *Determine that division is dividing objects into equal groups.
- *Explain the steps of Division.
- *Solve problems using Division.
- *Be able to use equal groups, drawings, and measurement quantities to solve division primoblems.
- *Will construct solutions to solve simple division problems, and will be able to explain and defend how they generated answers for division problems.

DIVISIONDIVISION OF 4-DIGIT NUMBERS

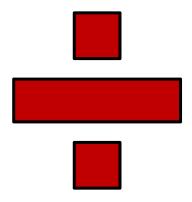

EXPLANATION

Do you know what a **DIVISION** mean ???

DIVISION is a quick and powerful way of subtracting the same number over and over again. Or we can say DIVISION means repeated SUBTRACTION.

DIVISIONDIVISION OF 4-DIGIT NUMBERS

Do you know what is the symbol or sign of DIVISION

DIVISION OF 4-DIGIT NUMBERS

DIVISION:

DIVIDEND

DIVISOR

QUOTIENT

* Here the number to be divided is called the **DIVIDEND.**

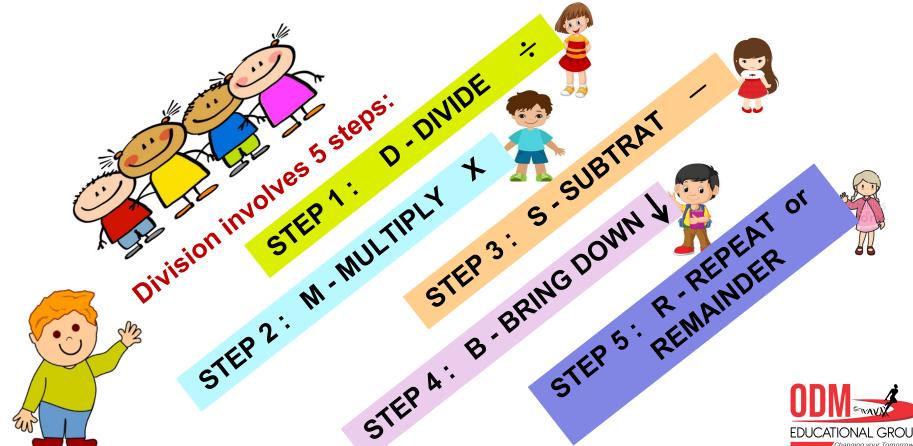

* The number that divides another number is called the

DIVISOR.

* The answer we get on dividing the numbers is called the **QUOTIENT.**

DIVISION OF 4-DIGIT NUMBERS

Let us understand through examples: 1-digit by 1-digit

$$6 \div 2 = 3$$

$$8 \div 2 = 4$$

$$\begin{array}{c}
3 \longrightarrow Q \\
\hline
2 \quad 6 \\
\hline
- \quad 6 \\
\hline
0 \longrightarrow R
\end{array}$$

$$\begin{array}{c|c}
 & 4 \longrightarrow Q \\
\hline
 & 8 \\
\hline
 & - & 8 \\
\hline
 & 0 \longrightarrow R
\end{array}$$

DIVISION OF 4-DIGIT NUMBERS

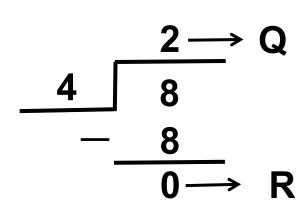

Let us understand through some more examples:

$$9 \div 3 = 3$$

$$3 \longrightarrow Q$$

$$- \underbrace{\begin{array}{c} 9 \\ \hline 0 \longrightarrow \end{array}}_{\mathsf{R}}$$

$$8 \div 4 = 2$$

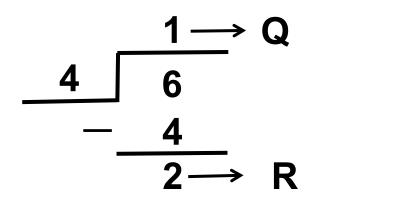

DIVISION OF 4-DIGIT NUMBERS

Here are some more examples lets see:

$$6 \div 4 Q = 1, R = 2$$

$$8 \div 5 Q = 1, R = 3$$

$$\begin{array}{c|c}
 & 1 \longrightarrow Q \\
\hline
 & 5 & 8 \\
\hline
 & - & 5 \\
\hline
 & 3 \longrightarrow R
\end{array}$$

DIVISION OF 4-DIGIT NUMBERS

Let us understand through examples: 2-digit by 1-digit

DIVISION OF 4-DIGIT NUMBERS

Let us see some more examples: 2-digit by 1-digit

$$48 \div 8 \quad Q = 6, R = 0$$

$$59 \div 7 \quad Q = 8, R = 3$$

$$6 \longrightarrow Q$$

$$-48$$

$$-48$$

$$0 \longrightarrow R$$

$$59 \div 7 \quad Q = 8, R = 3$$

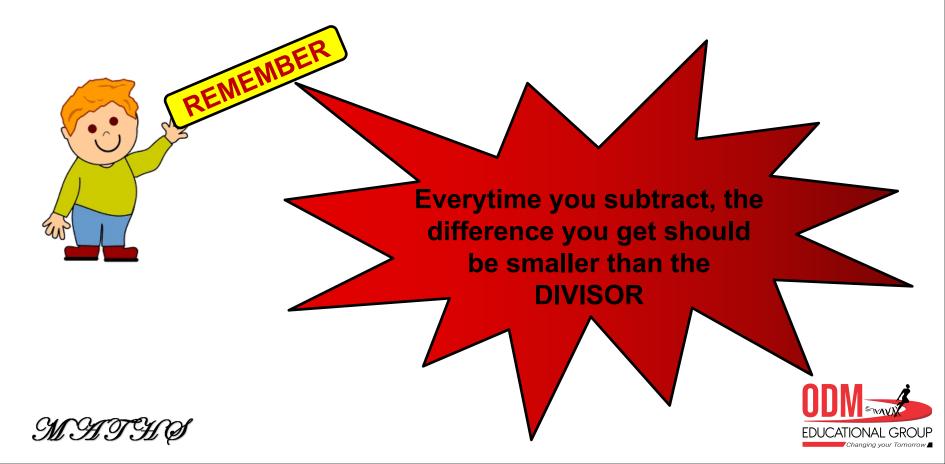

$$7 \quad 59$$

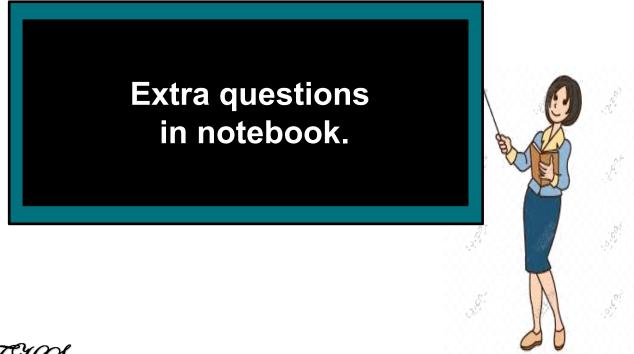

$$-56$$

$$3 \longrightarrow R$$

DIVISION OF 4-DIGIT NUMBERS

Now let us solve:

2) 7 ÷ 4

4) 65 ÷ 9

DIVISION OF 4-DIGIT NUMBERS

Now let us solve:

$$6 \div 3 = 2$$

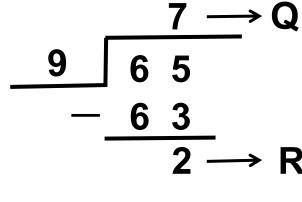

$$\begin{array}{c|c}
2 \longrightarrow Q \\
\hline
3 & 6 \\
\hline
- & 6 \\
\hline
0 \longrightarrow R
\end{array}$$

$$7 \div 4 = Q = 1, R = 3$$

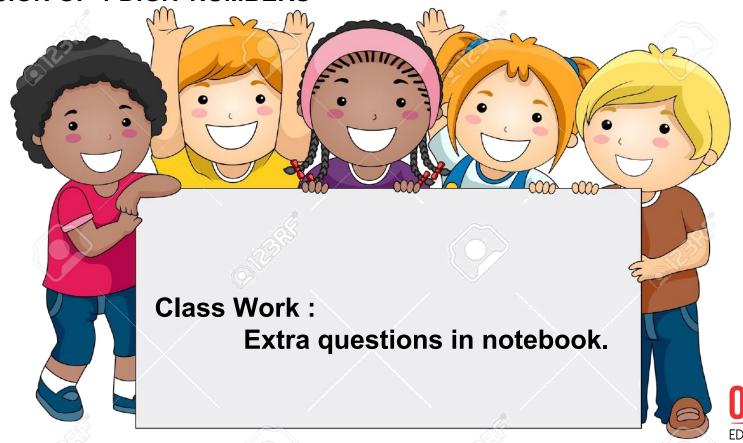

$$\begin{array}{c|c}
 & 1 \longrightarrow Q \\
\hline
 & 7 \\
\hline
 & - 4 \\
\hline
 & 3 \longrightarrow F
\end{array}$$

$$65 \div 9 \quad Q = 7, R = 2$$

LEARNING OUTCOME:

Children are confident to determine that division is dividing objects into equal groups. Explain the steps of Division. Solve problems using Division. Be able to use equal groups, drawings, and measurement quantities to solve division primoblems and will construct solutions to solve simple division problems, and will be able to explain and defend how they generated answers for division problems.
