Chapter-6

Parts of the Plants

STUDY NOTES

LET'S LEARN:

ABOUT THE DIFFERENT PARTS OF A PLANT:

As the human body made up of different parts, the plant is also having different parts like Root, Stem, Leaf, Fruit, Branch, Bud and Flower.

SHOOT AND ROOT

Description	Pictures
The part of a plant which grows above the ground is called the shoot. The part which grows below the ground is called the root.	Root
The shoot has stem, branches, leaves, buds, flowers and fruits.	Flower Leaf Fruit Stem

THE ROOT
There are two types of roots, tap root and fibrous root.

Description	Picture
When a main root grows from the end of the stem and many small roots grow from the main root is called tap root . Example: beans plant, mustard plant and balsam plant	TAPROOT
When a number of roots grow from the end of the stem is known as fibrous root . Example: plants like grass, wheat, rice and onion.	FIRROUS

Changing your Tomorrow 📕

FUNCTIONS OF THE ROOT

_	
Descr	ıntınr
D C S C I	יטייקי

The root fixes the plant in the soil.

The plant takes salt and water from the root for making food.

Vegetables like carrots, radish and beetroot have thick and swollen roots where food is stored. This food is used by the plant as well as we eat the roots of such plants.

THE STEM

Description	Picture
The stem grows above the ground.	Trunk

The main function of the stem is to hold the plant upright and support its branches.

The stems of neem and coconut trees are hard, strong and woody. They keep the trees upright. Such a stem is called a trunk.

The stem of the money plant is soft, green and weak. It needs support to stay upright.

The stem also carries water from the roots to the leaves.

The stem also carries the food made by the leaves to different parts of the plant.

In plants like sugarcane, extra food is stored in the stem.

In plants like the potato and the ginger the stem grows underground and stores extra food.

Weak stem

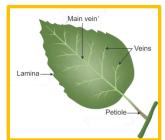

THE LEAF

The most important part of the shoot is the leaf.

Description	
The flat and broad part of a leaf is called the leaf blade or lamina.	
In the middle of the leaf is the main vein. A number of side veins	
branch out from the main vein. The veins carry water to the leaf.	

The green leaf makes food for the plant with the help of air, water and sunlight. This process is called photosynthesis. The leaf is called the kitchen or the food factory of a plant.

Leaves help a plant to prepare its own food, breathe and give out extra water.

Picture

THE FLOWER

The flower is the most beautiful part of a plant.

Description	Picture
The flowers grow into fruits.	

FRUITS AND SEEDS

Description	Picture
Fruits have seeds inside them. Some have one seed and others have	₹
many <mark>see</mark> ds. There are very few fruits that have no seeds.	

MOST PLANTS GROW FROM SEEDS

Description	Picture
	ricture
Most new plants grow from seeds. Seeds are protected inside the	
fruit EDUCALIONAL GR	
There is a baby plant and its food inside the seed of the mother	
plant. Changing your Ton	
The seed gets enough air, water and warmth which help the baby	
plant to grow into a fully grown plant. Banana seeds do not grow	
into new plants.	

Teacher's note:

Make a poster on 'Save Plants and Save Life'.

Imrove your G.K.:

- An average size tree can provide enough wood to make 1, 70, 100 pencils.
- > 85% of plant life is found in the ocean.
- Cricket bats are made of a tree called Willow and baseball bats are made out of the wood of the Hickory tree.
- Apple, Pears, Peaches, Apricots and Strawberries are members of the rose family.
- The first potatoes were cultivated in Peru about 7,000 years ago.

> Bamboo is the fastest growing woody plant in the world.

Let us answer:

- A. Tick (✓) the correct answer.
- 1. In addition to the stem, branches, leaves and buds, the shoot of a plant bears.
- a. flowers and roots
- b. fruits and roots
- c. flowers and fruits.

- 2. We eat the leaves of this plant.
- a. potato

b. tomato

- c. spinach
- 3. The stem of this plant is soft, green and weak.
- a. neem

b. coconut

c. money plant

- 4. The leaf of a plant is called its
- a. bathroom

b. kitchen

c. bedroom

- 5. Most fruits have these inside them.
- a. beads

b. seeds

c. seats.

B. Match the statement with the correct picture.

1.	It fixes the plant in the soil.	
2.	It takes water from the roots to the leaf.	
3.	It makes food for the plant	
4.	It changes into a fruit.	
5.	It grows into a new plant	

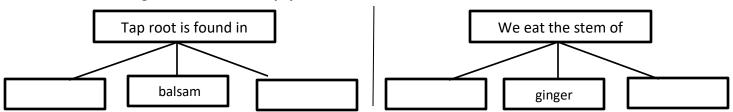

C. In which figure, are the parts of the plant correctly labelled?

D. Read the clues and unscramble the letters to get the names of the parts of the plant. Write the names on the blanks.

	A TION		
S. No	Clues	Unscrambled word	Fill in the blanks
1.	It grows above the ground	TEMS _	morrow A
2.	It makes the food for the plant.	FEAL	
3.	Most flowers grows into these	RUITSF	
4.	It grows below the ground	TORO	

E. Fill in the right words in the empty boxes.

F. Answer these questions.

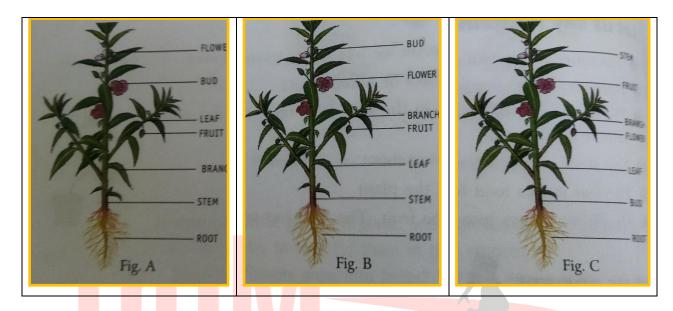

- 1. How is the root of a plant different from its shoot?
- 2. Write two functions of the root.
- 3. What are the uses of the stem?
- 4. What does a seed need to grow into a plant?

Answer key

- **A**. 1.c, 2.c, 3.c, 4.b, 5.b.
- B. Match the statement with the correct picture.

		V / W
1.	It fixes the plant in the soil.	
2.	It takes water from the roots to the leaf.	
	Chariging Vol	
3.	It makes food for the plant	
4.	It changes into a fruit.	
5.	It grows into a new plant	

C. In which figure, are the parts of the plant correctly labelled?

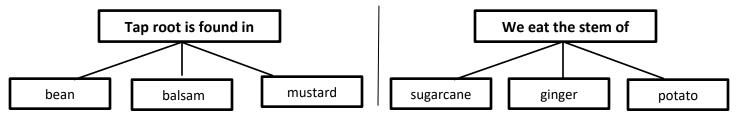

Ans. Fig B.

D. Read the clues and unscramble the letters to get the names of the parts of the plant. Write the names on the blanks.

S. No	Clues	Unscrambled word	Fill in the blanks
1.	It grows above the ground	TEMS	STEM
2.	It makes the food for the plant.	FEAL	LEAF
3.	Most flowers grows into these	RUITSF	FRUITS
4.	It grows below the ground	TORO	ROOT

E. Fill in the right words in the empty boxes.

F. Answer these questions.

- 1. The part of a plant which grows above the ground is called the shoot and the part of the plant which grows below the ground is called the root.
- 2. The two functions of the root are -
 - > The root fixes the plant in the soil.
 - It helps the plant to take water and salt from the soil.
- 3. The uses of the stem are -
 - The stem holds the plant upright and supports the branches.
 - The water taken by the roots travels through the stem to leaves also the stem carries the food made by leaves to different parts of the plant.
- 4. A seed needs air, water and warmth to grow into a plant.
