CHANGING YOUR TOMORROW

HOW THE WHEEL WAS INVENTED

- The early human lived in the forest and ate roots and fruits grew in the forests.
- When they hunted or killed small animals, they carried them in their back to their homes.
- But when they hunted large animals, like bison or elephant, it was not easy to drag or pull these animals along the ground over long distance.

- Nobody knows who invented the wheel. Perhaps, someone saw a log or a piece of wood from a tree roll down a hill.
- With that log it was easy to carry heavy things.
- With the passing of the time, early people realized that heavy things could move easily with the round logs.
