

Chapter- 15

Geometry

WORKSHEET

A. FILL IN THE BLANKS :

1. An angle measuring 180° is called a straight angle
2. The common starting point of an angle is called the vertex of the angle.
3. A right angle measures 90° .
4. To measure an angle in degrees, we use a protractor
5. A triangle whose all sides are equal is called a equilateral triangle.

B. CHOOSE THE CORRECT ANSWER :

6. A line segment has two end points
 - i) One end point
 - ii) no end points
 - iii) two end points
 - iv) none of these
7. Which of the following represents a line? axis of earth
 - i) Side of a square
 - ii) edge of cube
 - iii) axis of earth
8. A line has no length, breadth or thickness.
 - i) point
 - ii) line
 - iii) line segment
 - iv) ray
9. Identify which of the following is symmetrical?

i) X

ii) ✓

iii) X

C. DO AS DIRECTED:

10. Draw the following angles using a protractor :

a) 95° b) 45°

Ans. a.

b.

11. What type of triangles are these?

Isosceles triangle Right angled / Isosceles triangle

12. Find the area of the triangle.

Ans. Base of triangle (BC) = 18cm
 Height of triangle (AB) = 16cm
 \therefore Area of triangle ABC = $\frac{1}{2} \times b \times h$
 $= \frac{1}{2} \times 18 \times 16 = 144 \text{ cm}^2$

13. Name the sides, angles, and vertices of the given triangle.

Sides = AC, AB, BC Angles = ABC, BCA, CAB Vertices = A, B, C

14. Classify each angle as acute, obtuse, right or straight.

Straight angle

Obtuse angle
