## Digestive System - Assignment - Worksheet - Answers

- I.
- |                    |                    |
|--------------------|--------------------|
| 1. Mouth           | 2. Salivary gland  |
| 3. Liver           | 4. Gall Bladder    |
| 5. Anus            | 6. Rectum          |
| 7. Large Intestine | 8. Small Intestine |
| 9. Pancreas        | 10. Stomach        |
| 11. Oesophagus     | 12. Epiglottis     |

II. Mouth - Ingestion is taken place here. It involves swallowing and chewing the food

**Extra** Salivary glands - Contains saliva which has amylase.  
Amylase converts starch to maltose

Epiglottis - Prevents swallowed food from entering the lungs

Oesophagus - Food travels through peristalsis

Stomach - Contains glands called gastric glands which secrete gastric juice

Small Intestine - Foods remains here for digestion and absorption

Large Intestine - Egestion takes place here

Appendix - Storehouse for good bacteria

Rectum - Holds undigested food until elimination

Anus - Faeces is expelled out of the body

~~Diaphragm~~ -

Liver - Produces bile

Gall Bladder - Stores and holds bile

Pancreas - Produces digestive enzymes
