Resources

1q- Under which resource category has the above pic has been categorized ?

ans- The pic has been categorized under renewable resources.

2q- How do wind fans generate energy ?

ans: Wind turbines use blades to collect the wind's kinetic energy. Wind flows over the blades creating lift (similar to the effect on airplane wings), which causes the blades to turn. The blades are connected to a drive shaft that turns an electric generator, which produces (generates) electricity.
