Page No. _____

1. Earth is divided into Three heat Zones.
 2. The word torrid means extremely Hot.
 3. The amount of water vapour in the air is called Humidity.
 4. The average weather condition of a place over a long period of time is called Climate.
 5. Temperate Zone has a mild climate.
- iii places near the sea experience high humidity.
→ F
2. The north Frigid Zone lies between Arctic Circle and North pole. → F
 3. Land absorbs heat faster than water
→ F
 4. When the humidity is low, we feel sticky and hot and sweat a lot → T
 5. The sun rays fall directly on the poles
→ T

1. The Conditions of the atmosphere at a particular place and time. → weather
2. The Zone which lies near the equator → Tropical zone
3. The heat Zone between Arctic circle and tropic of cancer → Temperate Zone
4. Among the three zones this is the coldest one → Frigid Zone
5. Scientists who study predict the weather. → ~~meta~~ meteorologist

IV.1. Altitude

2. places near equator → Cold climate
3. Frigid zone → factor affecting climate
4. Height above the sea level → height
5. Torrid zone → not climate
6. Torrid zone → receives maximum heat
