Science worksheet

Air, water and weather.

A. 1. Changes in the weather are caused primarily due to Sun.

2. Frozen dew is also known as frost.

3. The level of underground water in an area is called the water table.

4. Air blowing towards the sea from the land is called land breeze.

5. Two chemicals which can kill germs in water are sedimentation and

Decantation.

B. 1. Earth keeps the sun warm. E

2. Water goes up in the form of vapour. I

Frost is advantageous to crops.

Land gets heated quicker than water. I

Polluted water is harmful to drink. I

(i) Condensation

(a) water vapour
~~vapours~~
freezes in clouds

(ii) Clouds

(b) drinking
water

(iii) Snow

(c) Millions of
water vapour
is ~~to~~ cooled
droplets.

(iv) Hail

(d) when water
vapour ~~is~~ cooled
is

(v) water works

(e) water drops
freeze on
their way
down

d. (a) A gas present in the air which is necessary for burning, oxygen

(b) Moving air, wind

(c) The main source of water, rainwater

(d) The thick layer of air surrounding the earth, the atmosphere

(e) Collection of rainwater for future use, rainwater harvesting
