

Revision Exercise 1

1. Find the H.C.F. of

(i) 108, 288 and 420

$$\begin{array}{r|l} 2 & 108, 288, 420 \\ 2 & 54, 144, 210 \\ 3 & 27, 72, 105 \\ & 9, 24, 35 \end{array} \quad 2 \times 2 \times 3 = 12$$

H.C.F. = 12.

(ii) 36, 54, and 138

$$\begin{array}{r|l} 2 & 36, 54, 138 \\ 3 & 18, 27, 69 \\ 3 & 6, 9, 23 \\ & \end{array} \quad 2 \times 3 = 6$$

H.C.F. = 6

2) Find the H.C.M. of :

(i) 72, 80, 252

$$\begin{array}{r|l} 2 & 72, 80, 252 \\ 2 & 36, 40, 126 \\ 3 & 18, 20, 63 \\ 3 & 6, 20, 21 \\ 2 & 2, 20, 7 \\ 2 & 1, 10, 7 \\ & 1, 5, 7 \end{array} \quad \text{H.C.M.} = 2 \times 2 \times 3 \times 5 \times 2 \times 2 \times 5 \times 7 = 6040$$

LCM
~~120~~ = 5040

(ii) 48, 66 and 120.

$$2 \overline{) 48, 66, 120}$$

$$2 \overline{) 24, 33, 60}$$

$$2 \overline{) 12, 33, 30}$$

$$3 \overline{) 6, 33, 15}$$

$$2, 11, 5$$

$$2 \times 2 \times 2 \times 3 \times 2 \times 11 \times 5 = 2640$$

~~LCM~~ LCM = 2640

2 (i) H.C.F. of two prime numbers is 1 - True

(ii) H.C.F. of two co-prime numbers is 1 - True

(iii) L.C.M. of two prime numbers is equal to their product - False

(iv) L.C.M. of two ~~prime~~ co-prime numbers is equal to their product - False

4. ~~2~~ The product of two numbers = 12096

$$H.C.F. = 36$$

$$L.C.M. = \frac{\text{The product of two numbers}}{H.C.F.}$$

$$= 12096 \div 36$$

$$36 \overline{) 12096} \quad 336$$

$$\underline{- 108}$$

$$129$$

$$\underline{- 108}$$

$$216$$

$$\underline{- 216}$$

$$0$$

6(i)

$$\begin{array}{l} 2 \mid 28 \text{ and } 42 \\ 7 \mid 14, 21 \\ \quad 2, 3 \end{array}$$

$$2 \times 7 \times 2 \times 3 = 84$$

∴, The smallest number that is completely divisible by 28 and 42 is 84.

(ii)

$$\begin{array}{l} 2 \mid 28, 42 \\ 7 \mid 14, 21 \\ \quad 2, 3 \end{array}$$

$$2 \times 7 = 14.$$

∴, The ^{largest} ~~smallest~~ number that ~~is~~ ^{can} ~~completely~~ divide 28 and 42 completely is 14.

So, the L.C.M of two numbers is 336.

5. The product of H.C.F and the L.C.M of 2 nos. = 1152
 One number is 48
 Other number = ~~1152~~ $\frac{\text{The product of H.C.F and the L.C.M of 2 nos.}}{\text{one number}}$

$$= 1152 \div 48$$

$$\begin{array}{r} 24 \\ 48 \overline{) 1152} \\ \underline{- 96} \\ 192 \\ \underline{- 192} \\ 0 \end{array}$$

So, the other number is 24.

≠ One number = 140
 another number = 168
 L.C.M = 840

$$\begin{array}{r} \text{LCM} = 840 \\ 2 \overline{) 140, 168} \\ 2 \overline{) 70, 84} \\ 7 \overline{) 35, 42} \\ 3 \overline{) 5, 6} \\ 5, 2 \end{array}$$

~~H.C.F~~ The product of two numbers is always same to the product of their L.C.M and H.C.F.

$$\begin{array}{r}
 140 \\
 \times 168 \\
 \hline
 11200 \\
 8400 \\
 + 14000 \\
 \hline
 23520
 \end{array}$$

If the product of the two nos. = 23520

$$\text{HCF} = \frac{\text{The product of two nos.}}{\text{LCM}}$$

$$\begin{aligned}
 &= 23,520 \div 840 \\
 &= \cancel{261} 28 \\
 &\cancel{840} \overline{) 23520} \\
 &\quad - 1680 \\
 &\quad \quad 6700 \\
 &\quad \quad - 5040 \\
 &\quad \quad \quad 1660 \\
 &\quad \quad \quad - 840 \\
 &\quad \quad \quad \quad 820
 \end{aligned}$$

$$\begin{array}{r}
 28 \\
 840 \overline{) 23520} \\
 \underline{- 1680} \\
 6720 \\
 \underline{- 6720} \\
 0
 \end{array}$$

So, the ~~LCM~~ H.C.F = 28

HCF = $3 \times 3 \times 2 = 18$

8. One number = 108
Another number = 450
HCF = 18

$$\begin{array}{r|l} 3 & 450, 108 \\ 3 & 150, 36 \\ 2 & 50, 12 \\ & 25, 6 \end{array}$$

The product of two numbers is always same to the product of their LCM and HCF.

$$\begin{array}{r} \textcircled{a} \\ 108 \\ \times 450 \\ \hline 000 \\ 5400 \\ \hline 43200 \\ \hline 48600 \end{array}$$

If the product of two nos. = 48,600

LCM = $\frac{\text{The Product of two nos.}}{\text{HCF}} = 2700$

$$\begin{array}{r} 2700 \\ 18 \overline{) 48600} \\ \underline{- 36} \\ 126 \\ \underline{- 126} \\ 00 \\ \underline{- 0} \\ 00 \\ \underline{- 0} \\ 0 \end{array}$$

So, the LCM of two nos. = 2700
