

## Homework - 2

- 1) The earth's crust is broken into a number of huge parts. They are called
- a) lithospheric plates
  - b) Metamorphic plates
  - c) ~~At~~ sedimentary plates
  - d) None of these.
- 2) Which of the following forces originate in the interior of earth?
- a) Exogenic Force
  - b) Endogenetic Force
  - c) Both (a) and (b)
  - d) None of these
- 3) Lithospheric plates move around very slowly. They are broken into disjunctive pieces.

The movement of the plate causes changes on the surface of Earth. The Earth molten magma inside the Earth. The movement of the plates causes the endogenetic force.

Transform :- Plate moving in parallel motion. Examples of fault - block mountain.
