Homework

1- Define light energy.

Ans- Light energy is a form of energy that affects our eyes to produce the sensation of vision.

2- Differentiate luminous and non luminous object.

Ans- The bodies which emit their own light are called luminous bodies. They shine and glow by their own light. A luminous body provides us light. Ex - The sun, a torch, the stars, burning candle, etc.

The bodies which do not emit light by their own, but become visible by the light falling on them from luminous bodies.

Ex- The moon, the planets, a table, a book, etc.
