

Fundenmental unit of life

1) Plant cell and animal cell similarities

A plant cell and animal cells are very similar because they both eukaryotic cell. They both contain membrane bound organelles such as the nucleus, mitochondria, endoplasmic reticulum, golgi apparatus, lysosome and peroxisomes. Both also contain similar membrane, cytosol and cytoskeletal elements.

2. Difference between plant and animal cell are

- * Plant cell have a cell wall but animal cell don't have.
- * Plant cell have chloroplast, but animal cell do not have.
- * Plant cell have large vacuole but animal cell have small vacuole.
