

Banyan Tree

The banyan tree is the national tree of India which represents the culture and history of India. The roots of this tree are spread wide and the stems are also contains some religious significance. It helps in giving shadow to many people because of the large branches.

It is believed that the lifespan of the banyan tree is up to 500 years. This tree is found in the subtropical and tropical areas of india, Pakistan and Bangladesh.

The colour of the bark of this tree is brown and bears red-pink colour fruits like figs. The length of the tree varies from 20 - 25 meters. The length of the leaves of the banyan tree is 10-20 cm long and 8-15 cm wide.

As the tree ages, its branches gets weak and ~~start~~ start to break.

There are many health benefits of the banyan tree as the hanging roots of the banyan tree helps in treating the

Problems of guns and health.
