Home assignment

1) What are the different forms of energy?

Ans) The different forms of energy are :-

- * Mechanical energy
- * Chemical energy
- * Sound energy.
- * Light energy.
- * Kinetic energy.
- * Potential energy
- * Gravitational energy.

2) Define mechanical energy and chemical energy.

Ans) • Mechanical energy - Mechanical energy is the sum of potential and kinetic energy.

• Chemical energy - This energy takes place in chemical reaction where new substance is formed.
