

Banyan Tree

The banyan is a species of trees that are huge in size and are well known for their heart-shaped leaves, their roots spread far and wide and so strong that they can weaken the foundation of big buildings if they come in their way, so, they are found mainly far away from infrastructures. Banyans have aerial roots that help them exchange gases and also help in reducing pressure on the underground roots. They give off huge amounts of oxygen and are used as a symbol of power. They are also perceived to be of vital importance to the environment.
