- Mention the points of ~~diff~~ difference between communicable and non-Communicable diseases

Communicable disease

- The diseases that can be passed on from one person to another person.
- They are infectious diseases
- They are caused by germs like bacteria, viruses, Protozoa etc.
- They are spread through air, water, food, contact, insect etc.
- Example - Bacteria cause tuberculosis, typhoid, Pneumonia.

Non-communicable disease

- The diseases that are not passed on from one person to another person.
- They are not infectious diseases.
- They are not caused by germs but are due to deficiency of some minerals or vitamins.
- They do not spread through any agent.
- Example - Night blindness is caused by deficiency of vitamin A.

• Communicable disease

- Protozoa cause malaria
- Viruses cause corona, Polio, Measles.

Non-communicable disease

- Goitre is caused by deficiency of Iodine
- Anaemia is caused by deficiency of Iron.
