

HW
Revision
28 Sep 2021

Ecosystems:-

1) How roots are useful to the plants? Give two points.

Ans → The roots plays very important for the plant because:

→ They suck the water and nutrients up out of the soil into the plant.

→ They help the plants to stand firmly.

2) What is vegetative reproduction?

Vegetative propagation:-

The vegetative parts of the plants that are capable to give rise to new plants. are called as vegetative propagation propagules and the process is known as vegetative reproduction.

Ex → Onion produces as reproduction system of stem.

3) Draw and labelled diagram different parts of female reproductive system.

4) Define the terms flora and fauna

→ Flora - Various kinds of ^{large shrubs} trees including trees

→ ~~Animals~~ ✓ Fauna - animals like bears, Goats etc.
