

Polar Bears

- The Polar bears have white fur. Their colour merges with their surrounding and it becomes difficult to spot them.
- Thick layer of fat and fur for insulation against the cold.
- A greasy coat that shed water after swimming to help reduce heat loss.
- The ability to be a strong swimmer helps with hunting and swimming through ice.
- They have large feet to distribute their load and increase grip on the ice.

Camel

- The skin of a camel is thick and not very hairy. It protect them from the heat of the sun.
- They have long eyeshades to protect them from blowing sand.
- The camel can live without food and water for several days because it has a hump ~~where~~ where it stores the food and water.
- It has board, large feet to walk on sand easily.
-
