

Q- Even on a very hot day, people in coastal areas do not ~~feel~~ <sup>feel</sup> very hot. Why?

Ans. Even <sup>on a</sup> very hot day, people in coastal areas do not feel hot because Water has a higher heat capacity than soil and rock. So the ocean takes much longer to heat and to cool than the land. Coastal area will generally have more moderate temperature than inland area because of the heat ~~capacity~~ capacity of the ~~sea~~ ocean.
