

# REVISION QUESTION

## CHAPTER - 2

1) which of the following is responsible for the variation in the colour of soil in different parts of India?

a) Erosion and deposition

2) which of the following has not been a factor in the creation and modification of India relief's feature?

b) Population density.

3) which of the following is a plausible theory presented by earth scientists to explain the formation of continents and oceans and the various landforms?

b) Theory of Plate Tectonics.

4) According to the 'Theory of Plate Tectonics', the movement of the earth crust is governed by how many major plates?

c) Seven

5) According to the 'Theory of Plate Tectonics', the movements of the plates result in some geological activity. which one of the following is not a geological activity?

a) Faulting

6) According to the 'theory of plate Tectonics.' when some plates come towards each other, which of the following is formed?

a) Convergent boundary

7) According to the Theory of plate Tectonics "when some plates move away from each other which of the following is formed?

b) Divergent boundary

8) According to the Theory of Plate Tectonics, "if the event of two plates coming is not possible

c) the plates may form divergent boundary.

9) a) all of these

10) Periplum

11) The pericaral plateau

12) Gondwanaland

13) Europe

14) the Gondwanaland split into a nof plates

15) Northern Plains

16) The Himalayas

17) Peninsular Plateau.

18) Himalayan mountains

19) The Himalays

20) The Himalays

21) Himalayis

22) Great Himalayas on Himalayis

23) Kanchenjunge

- 24) Khyber Pass
  - 25) Himachal
  - 26) Khamet
