Q. No. The Earth is rotating, why do we not ~~feel~~ feel this movement?

Ans Earth moves very fast. It spins (rotates) at a speed of about 1000 miles (1600 kilometers) per hour and orbits around the sun at a speed of about 67000 miles (107,000 kilometers) per hour. we donot ~~feel~~ feel any of this motion because these speeds are constant.
