

1. As we travel closer towards the center of the Earth ~~it~~ the temperature rises up.
2. ~~The~~ The pressure increases as we travel down.
3. The three main layers of the Earth are
 - The Crust
 - The Mantle
 - The Core
4. The crust is made up of two layers. The upper crust ^{is} made up of silica and aluminium. The lower crust is made up of silica.
5. True
6. Two types of Earth's crust are:-
 - Upper crust
 - Lower crust
7. I think that to make water proof and the heat would not reach the water which dries up.
8. It consists mainly of minerals silica, iron and magnesium.
9. The crust and the outer part of upper mantle ~~is~~ makes the lithosphere.

10. Asthenosphere

11. The mantle is 2900 km deep

12. The earth's core is made of two parts
The outer core and the inner core

13. The two metals are nickel and iron
