

Light Energy

Primary Colours

Primary colours are the colours of light by mixing which white light is obtained. ^{Ex} Red, green and blue lights are projected on a white screen at the same point, white light is obtained. Hence, red, green and blue are called primary colours.

Secondary Colours

Secondary colours are the colours of light which are obtained by mixing two primary colours together. ^{Ex} If red and green light are ~~at~~ ~~obtained~~ projected on a white screen, yellow light is obtained.
