Q. Draw important lines of latitude with their degrees and justify how it is important?

- 1) Latitude lines are circles that circle the globe in an east-west direction; these are known as parallel lines.
- 2) It measures how far north or south a point lies from the equator.
- 3) The equator is at zero degrees latitude and separates Earth's northern and southern hemispheres.
- 4) Locations north of the equator have latitudes between 0° to 90° N.
- 5) Locations south of the equator have latitudes between 0° to 90° S.
