5-light

What is light?

Light is a type of wave that carries energy through matter or space.

A source of energy such as the Sun or a light bulb gives off light waves that spread out in all directions from the light source.

A light ray is a narrow beam of light that travels in a straight line.

Luminous object: Object which produces light.

- Produces light
- It has own light
- These are responsible for vision.

Examples - Fireflies, Jellyfishes, sun, star, laser, Bulb, torch etc.

Non-luminous object: Object which doesn't produce light

- Not able to produce light
- Don't have its own light
- These are visible due to light.

Examples - person, table, chair, windows, books, pens, bricks etc.
