

H.W

1. Define natural magnet.

Ans → The ore of magnetite (or lodestone) found in nature are called natural magnets. They are found in irregular and odd shapes. They are weak in strength, so they are not of much use.

2. Differentiate magnetic and non-magnetic substance.

Ans → Magnetic substance

- ① Materials which get attracted towards magnets are called magnetic materials.
Ex - Iron, Nickel etc.

Non-magnetic substance

- ① Materials which don't get attracted towards magnets are called non-magnetic materials.
Ex - Wood, Paper, Plastics etc.
