~~Water~~
Flood

Flood is one of the Natural disasters and risky. It happens when too much water in any area. It often happens because of heavy rain. The overflow of rivers causing natural disaster is widespread in several areas. Moreover, the melting of snow also occurs. The breaking down is another reason for flooding. In our opinion of the coastal regions, flooding is caused by storms & tsunamis. The flood control and long term effects of flooding can be seen in this essay. Low-pressure systems or winds are allowing this. It is also due to human actions that heavy rain is caused.
