

Homework

and

A bat, a bird can fly, yet they are different from each other. Why?

BATS

- ~~Bats~~ Bats have jaw bone sharp teeth

- They are the only mammal can flight. ~~don't~~ doesn't give egg and produce milk to give its baby.

- Their wings are made of skin and connected to hind and front legs which make them strong.

BIRDS

- Don't have jaw ~~bone~~ bone and no teeth but ^{have} beaks.

- They ~~are~~ give egg for reproducing and doesn't produce milk but forage to feed their babies.

- Their wings are made of feathers and can fly faster.
