

How
16/7/21

- ① Distinguish between fertilisation and pollination. Mention the site and product of fertilisation in flower.
- ② Draw a neat labelled diagram of a pistil showing pollen tube growth and its entry into the ovule.

Answers

① Pollination is the process in which the pollen grains from the anthers are transferred to the stigma of a flower of the same species.

Fertilisation is the process ~~by which~~ which fuses male sex cells and female sex cells to form zygote. It is formed inside the ovule.
