

8. $93-3=90$, $111-3=108$, $129-3=126$
So, the HCF of 90, 108 and 126 is =

$$\begin{array}{r} \text{HCF of 90 and 108} = 90 \overline{)108} \text{ (1)} \\ \underline{-90} \\ 18 \overline{)90} \text{ (5)} \\ \underline{-90} \\ 0 \end{array}$$

$$\begin{array}{r} \text{HCF of 18 and 126} = 18 \overline{)126} \text{ (7)} \\ \underline{-126} \\ 0 \end{array}$$

So, the greatest number which when divided by 93, 111 and 129, leaving a remainder of 3 is 18

$$\begin{array}{r} \text{ans} \\ 24 \overline{)24} \end{array}$$

Exercise 8(c)

8, 12 and 24

Multiples of 8 = 8, 16, 24, 32, 40, 48, 56, 64, 72, 80

Multiples of 12 = 12, 24, 36, 48, 60, 72, 84, 96, 108, 120

Multiples of 24 = 24, 48, 72, 96, 120, 144, 168, 192, 216, 240

So, the LCM of 8, 12 and 24 is 24.

$$\begin{array}{r} \text{Hw} \\ 24 \overline{)24} \end{array}$$

ii) 10, 15 and 20.

10 = 10, 20, 30, 40, 50, 60, 70, 80, 90, 100, ...

15 = 15, 30, 45, 60, 75, 90, 105, 120, 135, 150, ...

20 = 20, 40, 60, 80, 100, 120, 140, 160, 180, 200, ...

Ans - LCM = 60.

iii) 3, 6, 9 and 12.

Solution:

- 3 = 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36
- 6 = 6, 12, 18, 24, 30, 36, 42, 48, 54, 60
- 12 = 12, 24, 36, 48, 60, 72, 84, 96, 108, 120
- 9 = 9, 18, 27, 36, 45, 54, 63, 72, 81, 90.

Ans- LCM = 36.

~~25/8/21~~

Exercise 8 (B)

2.7) 18, 24 and 96.

Solution:

- 2 | 18, 24, 96
- 2 | 9, 12, 48
- 2 | 9, 6, 24
- 3 | 9, 3, 12
- 3 | 1, 1, 4

$LCM = 2 \times 2 \times 2 \times 3 \times 3 \times 4 = 288$

v) 100, 150 and 200. 34, 85 and 51.

Solution:

$$17 \overline{) 34, 85, 51}$$

$$2, 5, 3$$

$$17 \times 2 \times 5 \times 3 = 510$$

iii) 14, 21 and 98.

Solution:

$$7 \overline{) 14, 21, 98}$$

$$2 \overline{) 2, 3, 14}$$

$$1, 3, 7$$

$$LCM = 7 \times 2 \times 3 \times 7 = 294$$

ii) 100, 150 and 200.

Solution:

$$2 \overline{) 100, 150, 200}$$

$$5 \overline{) 50, 75, 100}$$

$$5 \overline{) 10, 15, 20}$$

$$2 \overline{) 2, 3, 4}$$

$$1, 3, 2$$

$$LCM = 2 \times 5 \times 5 \times 2 \times 3 \times 2 = 600$$

iv) 22, 121 and 33

Solution:

$$\begin{array}{l} 11 \overline{) 22, 12, 1, 33} \\ 2, 11, 3 \end{array}$$

$$\text{LCM} = 11 \times 2 \times 11 \times 3 = 726$$

$$\begin{array}{l} 2 \overline{) 12, 18} \\ 3 \overline{) 6, 9} \\ 2, 3 \end{array}$$

$$\text{HCF} = 2 \times 3 = 6$$

$$\text{LCM} = 2 \times 3 \times 2 \times 3 = 36$$

$$\text{HCF} \times \text{LCM} = 6 \times 36 = 216$$

$$12 \times 18 = 216$$

So, we can observe that, $\text{HCF} \times \text{LCM} = \text{Product of the two given numbers}$.

Exercise 8(C)

3. Solution:

$$\text{HCF} = 50, \text{ LCM} = 300$$

$$\text{1st number} = 150$$

$$\text{2nd Number} = ?$$

$$\text{As Product of two numbers} = \text{HCF} \times \text{LCM}$$

$$150 \times 2^{\text{nd}} \text{ no} = 50 \times 300 = 15000$$

$$\text{2nd no} = 15000 \div 150 = 100.$$

6. Solution:

The smallest number which when divided by 12, 15, 18 and 24 and 36, leaves no remainder is the LCM

$$\begin{array}{r|l} 3 & 12, 15, 18, 24, 36 \\ 2 & 4, 5, 6, 8, 12 \\ 3 & 2, 5, 3, 4, 6 \\ 3 & 1, 5, 3, 2, 3 \\ & 1, 5, 1, 2, 1 \end{array}$$

$$\text{LCM} = 3 \times 2 \times 2 \times 3 \times 5 \times 2 = 360$$

$\therefore 360$ is the number which when divided by 12, 15, 18, 24 and 36 leaves no remainder.

~~Ans~~
~~25/5/21~~

4. Product of two numbers = 432

$$\text{LCM} = 72$$

As, Product of two numbers = HCF \times LCM

So, HCF = Product \div LCM

$$= 432 \div 72 = 6 = \text{HCF}$$

$$\begin{array}{r} 6 \\ 72 \overline{) 432} \\ \underline{-432} \\ 0 \end{array}$$

Ans: So, the HCF is 6.

5. The product of two numbers = 19,200.

HCF = 40

Product of two numbers = HCF \times LCM

So, LCM = Product \div HCF
 $= 19,200 \div 40 = Q = 480, R = 0$

$$\begin{array}{r}
 480 \\
 40 \overline{) 19200} \\
 \underline{- 160} \\
 3200 \\
 \underline{- 320} \\
 00 \\
 \underline{- 00} \\
 0
 \end{array}$$

Ans. \therefore LCM is 480 ✓

7. The smallest number, which when divided & increased by 1 is exactly divisible by 12, 18, 24, 32 and 40 is LCM - 1.

So, LCM of 12, 18, 24, 32 and 40

$$\begin{array}{l}
 = 2 \overline{) 12, 18, 24, 32, 40} \\
 2 \overline{) 6, 9, 12, 16, 20} \\
 3 \overline{) 3, 9, 6, 8, 10} \\
 2 \overline{) 1, 3, 2, 8, 10} \\
 1, 3, 4, 5
 \end{array}$$

LCM = $2 \times 2 \times 3 \times 2 \times 3 \times 4 \times 5 = 1440$

The required number = $1440 - 1 = 1439$

8. The smallest number which, on being decreased by 3, is completely divisible by 18, 36, 32 and 27 is LCM + 3.
 LCM of 18, 36, 32 and 27 =

✓

$$\begin{array}{l}
 2 \mid 18, 36, 32, 27 \\
 3 \mid 9, 12, 16, 27 \\
 2 \mid 3, 4, 16, 9 \\
 2 \mid 3, 2, 8, 9 \\
 3 \mid 3, 1, 4, 9 \\
 \quad 1, 1, 4, 3
 \end{array}$$

$$\text{LCM} = 2 \times 3 \times 2 \times 2 \times 3 \times 4 \times 3 = 864$$

$$\text{Required number} = 864 + 3 = 867$$

\therefore the required number is 867.
