

1. We always need to store liquids in containers. Why?

A- We always need to store liquids in containers because in liquids molecules are loosely packed and can move around.

2. The smell of a perfume spreads very quickly from one corner from one corner of the room to the other. Why?

A- The smell of a perfume spreads very quickly from one corner from one corner of the room

because the molecules in gases are very loosely packed and gases can flow easily.
