

Why should we use CFL bulbs & Tubelights?

A. CFLs are upto 10 times more efficient than incandescent bulbs. you can replace a 100-watt incandescent bulb with a 22-watt CFL & get the same amount of light. CFLs use 50-80% less energy than incandescent light. you can do your part in reducing carbon emissions by changing over to CFLs and tubelights. CFLs are great for smaller areas like Pooja rooms, kitchen, bathrooms etc where the light requirement is less. For bigger rooms like drawing rooms & bed rooms the tube lights are better. Tubelights are also better for task like reading, studying & sewing. That ~~require~~ require much more brightness.
