

# Prevention of Rusting

\* Galvanization - The process in which metals are coated with zinc.

Galvanization is used in iron articles like roof sheds, buckets and tubs etc. Water pipes after galvanization are known as GI pipes. Galvanized ~~steel~~ Steel ~~is~~ is not used for food containers as acids present in the food react with zinc to form poisonous substances.

- Tin plating
- Aluminium plating
- Alloy formation
- Electroplating - The coating of superior metal by the passage of electricity is called electroplating.
