- Q1. The energy coming from the sun, lamp or torch is called light.
- Q2. Natural sources of light are light or energy that is produced naturally. Artificial sources of light are energy that produce their own light but the device is created by humans. Human effort is applied in the artificial sources of light.
- Q3. Luminous objects are objects that produce or emit their own heat and light. Non luminous objects are objects that do not emit their own heat and light.
- Q4. A ray of light is a light that extends in one direction only. It travels in a straight path.
- Q5. A beam of light is a group of light that travels in different paths.
