

Interior of the Earth

Worksheet

- 1) Temperature of Earth increase with Earth's core as we travel closer to the Earth.
- 2) The pressure also increase as you travel down.
- 3) The three main layers that make up the Earth's interior is The mantle, The outer core and The inner core.
- 4) The crust is made up of upper crust and lower crust.
- 5) The Earth's crust includes both the ocean floor and dry land. T
- 6) The two types of crust are oceanic crust and continental crust.
- 7) The oceanic crust consists of a volcanic lava rock called Basalt. These rocks are more denser and heavier than other rocks. So, the oceanic crust contains more dense rocks.
- 8) The layer of mantle consists of upper mantle,

and lower mantle.

- 9) The lithosphere is made up of crust, outer part of the upper mantle.
- 10) Right below the lithosphere is a layer of mantle that is made of softer rock called the asthenosphere.
- 11) The mantle is 2,900 km thick and depth is 300 km to 2,900 km.
- 12) Two earth's core are upper core and inner core.
- 13) Two metals are nickel and iron.
