1) In the bright light the size of pupil is small to control the amount of light entering the eye. When we are in the dark the pupil ~~too~~ becomes large.

- 2) i) Iris \rightarrow It controls the size of pupil
ii) Eye lens \rightarrow It is convex. which focuses the image of the object on the retina.
iii) Retina \rightarrow It contains Rods & cones.

3. This is due to the ability of the eye lens to adjust its focal length.
