

## HOMF ASSIGNMENT

1) Define glands.

A- A gland is a structure which secretes a specific substance in the body.

2) What are the different types of glands?

A- Our body has 2 types of glands - exocrine and endocrine glands.

3) Write 2 difference between the types of glands.

A- EXOCRINE GLAND

★ A gland which secretes its product into a duct or tube is called exocrine gland.

★ Some of them are salivary glands, liver, pancreas, and sweat glands.

ENDOCRINE GLAND

The hormone-producing glands are called endocrine glands.

Some of them are thyroid gland, adrenal gland, pancreas, and pituitary glands.
