Q1) What is friction?

Ans The force which slows down the motion of a moving body in contact with the surface of another body, is called the frictional force or the force of friction.

Q2) What are the effects of friction?

(A) The effects of friction are:-

- (i) Friction opposes motion.
- (ii) Friction always act in a direction opposite to the direction of motion.
- (iii) Friction produces heat.

(iv)

Friction causes wear and tear.
