

Q Do you think the classification of economic activities into primary, secondary & tertiary is useful? Explain how.

A- Yes, I think that the classification of ~~economic~~ economic activities into primary, secondary & tertiary is useful because it provides the information on how & where the people of a country are employed. This helps in ascertaining as to which sector of economic activity contributes more or less to the country's GDP & per capita income.

If the tertiary sector is developing more faster than primary, it implies that more measures should be taken to increase productivity in agriculture.

The knowledge that the agricultural profession is becoming unpopular can only come if we know which sector it belongs to.

Thus, this classification helps in the smooth economic administration & development.

Q Make a long list of all kinds of work that you find adults around you doing for a living. In what way can you classify them? Explain your choice.

<u>Nature of work</u>	<u>Nature of activity</u>	<u>Sector</u>
(i) Bank clerk	Tertiary	Organised
(ii) Doctor in AIIMS	Tertiary	Organised
(iii) Farmer	Primary	Unorganised
(iv) Mine workers	Primary	Unorganised
(v) Construction workers	Secondary	Unorganised
(vi) Public sector	Secondary	Organised
factory supervisor		
(vii) DTC Bus Driver	Tertiary	Organised
(viii) Freelance cartoonist	Tertiary	Unorganised
