

Q- Empty bottles of mineral water should be crushed before throwing them into the dustbin. Why?

A → We should crush water bottles after using them because they have a tendency to accumulate germs in them after their first usage.

They are also made up of thin plastic which is not suitable for recycling.

Some people also collect these bottles and pour ~~the~~ other liquids in it. If it is saved it is used for a longer time, ~~it~~ the user may get ill. That's why it is important to crush ~~water~~ plastic bottles after use.
