Exercise 10 (E)

Q No. 1. A train travels 6 hours 20 minutes to reach its destination. For how many minutes does it travel?

A. 1 hour = 60 minutes

$$6 \text{ hour} = 60 \times 6 = 360 \text{ minutes}$$

$$6 \text{ hour } 20 \text{ minutes} = 360 + 20 = 380 \text{ minutes}$$

So, a train travels 380 minutes

Q. 2. Mr. Rajan stayed in hotel for 5 days.

How many hours he stayed in the hotel.

$$1 \text{ day} = 24 \text{ hours}$$

$$5 \text{ days} = 24 \times 5 = 120 \text{ hours}$$

So, he stayed 120 hours in the hotel.
